## Cégünkrol - ekatec GmbH

Tevékenységünk középpontjába az Önök szerelési folyamatainak optimalizálását helyeztük és ma-gunkra, mint a szerelési és csavarozási problémákat megoldó specialistára tekintünk.

Az európai autógyártók többsége már cégünk megoldásaira támaszkodik a szerelési folyamataik-ban. A következő oldalakon az elmúlt évek alatt összegyűlt tapasztalatok alapján láthatnak egy kis betekintést megoldásainkra.

### The Company

The focus of our activities is the optimization of your assembly processes. We see ourselves as a specialist for the solution of assembly and screwing problems. Numerous considerable car manufacturers are using already our solutions for their assembly processes. On the following pages you can get an impression of these years of experience.

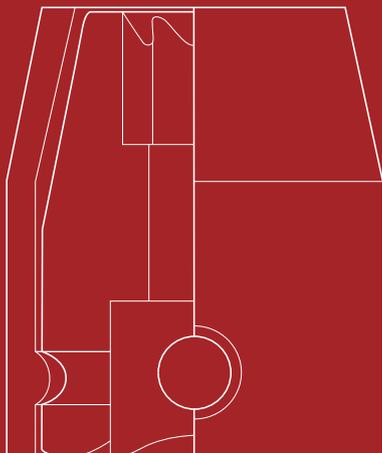

## Pár szó a katalógushoz

Az autók összeszerelésekor a csavarozási műveletek darabszáma gyakran 1000 darab körül van, autónként. A csavarkötések közvetlenül a már kész fényezett, műanyag illetve fémes felületeket érintik, mely felületek igen érzékenyek. Ezért annak veszélye, hogy a szerelésre használt szerszámok a már kész felületeket megsértik, folyamatosan napirenden van.

Csaknem mindegyik csavarozási folyamat magában hordozza a felületek sérülésének kockázatát. Ennek folyamánként nem meglepő, hogy pont az ilyen sérülések mint növekvő költségtényező kerülnek felismerésre. Minőségbiztosítási - és speciális Karc-teamek, akik ezen sérülések okait vizsgálják ki, lassan már minden autógyárnál felállításra kerültek. Ez is arra utal, hogy az elmúlt időben ez a költségtényező mekkora figyelmet kapott.

### Gazdaságosság javítása

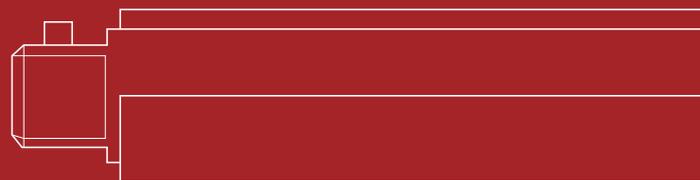

A szerelési környezet területének folyamatos csökkenése, az egyre nehezebb hozzáférhetőség - az egyre összetettebb termékek következményeként - és az egyre kényesebb felületek együttesen vezetnek a hagyományos szerszámokkal elkerülhetetlenül okozott sérülésekhez. Ezért a szerelésből adódó sérülések elkerülése magas prioritást képvisel a gazdaságosságot javító intézkedések listáján.

## covertec – Rendszer a védelemre

---

covertec – Systematic protection

## A covertec – Rendszer

A szerelési sérülések kijavításához szükséges utómunkák (ellenőrzés, csiszolás, lakkozás, pótlás...) többlet erőforrást igényelnek, másrészt jelentősen növelik az átlagos összeszerelési időt. Ugyanakkor a mai költségnyomás és alacsony nyereségesség mellett a gazdaságosság javítása a piaci túlélés fontos előfeltétele.

Biztonság javítása - a forgó szerszámok által okozott balesetek elkerülhetőek. Az előforduló sérülések jelentősek, de ezek a sérülések az általunk gyártott covertec szerszámokkal, kiemelten a Pinch-Point megoldással, megbízhatóan csökkenthetőek.

### Comments on the Catalog

During vehicle assembly, the number of fastening operations often is up to 1000 pieces per vehicle. The screwed directly adjoin already painted surfaces as well as metal and plastic parts whose surfaces are very sensitive. Violations of these surfaces by assembly tools are therefore on the agenda. Nearly every tightening case runs the risk of coatings and surface damage during assembly. Therefore it is not surprising that precisely these damages are recognized increasingly as a cost factor in.

Quality assurance and special Scratch teams who carry out the causes of this damage, are already in use in almost all manufacturers and gives an indication as to which attention is paid to this cost factor in the meantime.

### Optimize profitability

Constantly decreasing installation spaces and increasingly difficult accessibilities during assembly due to increasingly complex products with ever more sensitive surfaces lead to damage components with standard tools. To avoid this damages is high on the list of economic efficiency factors of a vehicle assembly.

### Improve safety – avoid injury

Accidents caused by rotating tools such as wrap of gloves or clothing are avoidable. The resulting injuries are to be avoided reliably and significantly with the use of our covertec tools and especially by using the Pinch-point versions.

Az Ekatec Kft az első covertec-szerszámot 2005-ben szállította ki a vevőjének. Időközben kialakítottuk a covertec-Rendszert minden szerszámra. A fejlesztési célunk a covertekkel kapcsolatban az volt, hogy a szerelési folyamatokban fellépő sérülések elkerülésére rendszerszintű választ tudjunk adni és ne csak elkülönített egyszeri megoldást kínáljunk.

A covertec-Szerszámok különleges tulajdonságát a speciális covertec - Borítás adja, amely számtalan kísérletezési folyamat eredményeként jött létre. Kiemelt szempontok a persely védelmi funkciója és a magas élettartam, utóbbi tulajdonság a covertec-Védőperselyre és az alapszerszámra is meghatározó.

A covertec - Persely mechanikusan nincs rögzítve az alapszerszámhoz. Ennek eredményeként a persely alkatrészrel vagy kesztyűvel történő érintkezésekor állva marad. Így kizárható az alkatrész felületének vagy a szerelést végző személynek a sérülése. Ezzel együtt a Persely és az alapszerszám kapcsolata alakzáró és a Persely nagyobb terhelés esetén sem válik le az alapszerszámról.

A covertec-Persely alacsony költségen, mint pótalkatrész, minden covertec-szerszámhoz utánrendelhető. A Persely szerelése a helyszínen gond nélkül megoldható.

## The covertec-System

The first covertec tools were delivered to customers by the ekatec GmbH in the year of 2005. In the meantime there is the covertec-system for all assembly tools. Objective in the development of covertec was to provide a complete system to prevent damages during the assembly process, and not just isolated individual tool solutions.

The special properties of covertec tools are achieved by the special covertec sleeves that has emerged from many trials. The decisive factor is the protective function of the sleeves in combination with a very good life of the protective sleeves and also the basic tool.

The covertec sleeve is mechanically decoupled from the basic tool. In case of a collision, the sleeve will stop. Damages to the component or injury is therefore ruled out. The sleeve is still interlocking mounted on the covertec tool and does not dissolve even under heavy load from the basic tool.

The sleeve can be ordered as a spare part for each covertec tool separately. The assembly of the sleeve is easily possible on site.

## covertec – Módszeres védelem

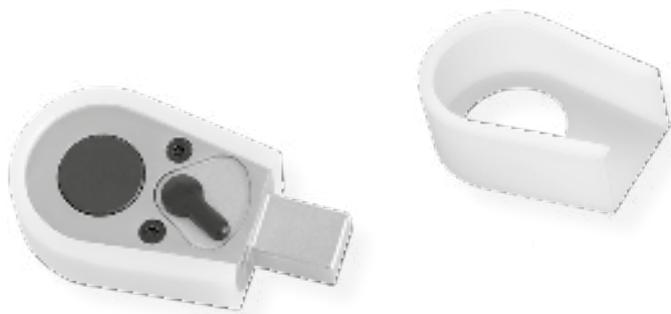

covertec – Systematic protection

Alig van annyira elterjedt szerszám, mint a racsniskulcs. Ezek a kulcsok már szinte egyetlen szerelőállomásról sem elhagyhatóak. Amennyire gyakori a felhasználásuk, csaknem annyiszor kell számolni az abból adódó lakkozási és felületi sérülésekkel. Amíg a nyél gyakran gummival védett, addig a burkolat nélküli fejrésze a munkadarabon felületi sérüléseket okozhat. A racsnis kulcsokhoz kialakított covertec Burkolattal hatékonyan védhető a csavarkulcs feje. Csak fel kell pattintani és mehet a munka.

---

Ratchet adapters and reversible ratchets are incredibly common assembly tools. They are an essential component of so many assembly processes. Unfortunately, the resulting damage to paint and surface finishes is equally ubiquitous. Although the handle is generally protected with a rubber sleeve, the bare head can cause damage when it comes into contact with the paint or other surface finish. With covertec click-fit shields, you can now effectively protect the ratchet head as well. Simply push on the sleeve and get started.

... and what goes with it.

covertec Lágy kalapács

Az ekatec speciális, puha gumiból készült kalapácsával könnyen szerelhetők a sérülékeny alkatrészek. A speciális kalapácsunkkal burkolóelemek, díszlécek vagy az üveg sérülés nélkül beilleszthetők. Emellett a dolgozó egészségének terhelése is jelentősen csökken.

#### covertec softblow hammer

This special soft rubber hammer from ekatec is ideal for fitting sensitive components. Sections of panelling, trims or glass can be fitted without damage by using our special hammer. It also improves the health hazards of your employees.

covertec Bevonat

Nem ritkák a látható felületeken szerszám által okozott sérülések. Ilyen sérülések elkerülése érdekében ajánlunk hatékony védőbevonatokat.

#### covertec coating

It is not unusual for the surface finish of visible parts, that they are damaged by tools during the assembly process. We are offering effective, protective coatings to avoid these damages.

covertec Kihúzható pecsét

A covertec lakkvédelmi rendszerének egy építőeleme.

#### covertec roller stamp

A module of the covertec paint protection system.

covertec hordozható láda és tartozékok

A covertec-Sorozathoz tartozó szerszámos dobozzal nem csak egy elhelyezési módot nyújtunk a szerszámoknak és a szerelési anyagoknak, ami nem csak a tároláshoz egy rendszerezettséget ad, hanem ezen túl még egy védelmi szerepet is biztosít a lakk illetve felületi sérülések ellen. A szerszámos dobozzal okozott - a karosszéria mellett elmenve nem szándékosan ejtett - karcolások a múlt része volt.

A szerszámos doboz lerakásakor is, például valamelyik karosszéria elemre, véd az ekatec bevonatos szerszámos doboza a karcolások ellen. Az Önök szerszámainak tárolására 3 különböző hordozható doboz áll rendelkezésére különböző részegységekkel, védőburkolattal és textilbevonattal.

covertec carrying case and inserts

The toolboxes of the covertec series provide a system for keeping your tools and assembly equipment, which does not only keep them in order. They also offer additional protection against damages to paint and surface during the assembly process. Scratches caused by accidentally scraping of the toolbox against the bodywork are now a thing of the past.

There are 3 different carrying cases with different inserts and protective sleeves available, as well as a fabric cover for your tools. Also in cases of putting the toolbox down on parts of the bodywork, the provides a reliable protection against scratches.

covertec Szerszámotáska

A Szerszám-Övtáska kifejezetten az autóiipari követelményekre fejlesztettük. Sok szerszám számára kínál helyet és teljesen lefed nagyobb szerszámokat. A mozgási lehetőség sincs korlátozva. A szerszámok elhagyásának esélye a stabil zárszerkezet következtében minimális - a szabadon hordott szerszámok esetén a lakk-sérülések elkerülhetőek. A szerszámotáska jó minőségű bőrből készül. Mivel raktári termék, a szállítási határidő rövid.

### covertec tool bag

The belt tool bag was specially designed for the requirements of the automotive industry. The tool bag offers enough space for a lot of tools and covers even large tools. The movement is not restricted. The robust closure minimises tool losses and prevents damages of unprotected paintwork from tools. It is made of high-quality leather. The tool bag is available from stock, so delivery times are very short.

covertec Különleges fogó

Fogó, különleges covertec Bevonattal.

### covertec-Special pliers

Pliers with special covertec-coating.
